3 HANDY LENGTHS
10 SIZES EACH

EASY TO GRASP HANDLE

Special "loop handle" design makes hex key easier, more efficient to use—provides maximum torque for greater wrench leverage even in tight areas. Saves time and labor too.

HANG-UP CONVENIENCE

Hang it nearby—where you can always find it. No time spent searching for "lost hex keys."

OUTSTANDING QUALITY

High quality chrome nickel alloy steel. Precision drawn for closest tolerance to insure accurate fit into screw head. Hardened and tempered by special martempering process—an Eklind exclusive!

WHAT YOU SHOULD KNOW ABOUT

Eklind HEX KEY QUALITY

- Eklind keys are produced from 8650 Chrome Nickel alloy steel—drawn to a tolerance of plus .000—minus .001. All corners of the hex stock are sharp and clean.
- Eklind keys are distortion free, because of the use of an individual “cut off” die for each size with larger sizes being deburred on the ends.
- The loops in Eklind fold-up keys are folded over the corners of the hex stock so that in assembly each key lays flat against the next key. Thus forming a more compact and balanced tool.
- Eklind keys are formed with a flat on the far edge of the “loop”, which locks the key in a right angle position against the flat spring on the bottom of the case. This spring also holds the key in any position or angle the user may desire.
- The Eklind handle is formed from a single piece of high grade steel—sharp corners and edges are eliminated for maximum gripping comfort.
- Eklind tools are clearly marked with sizes on the case or handle, for easy identification of wrench.
- Eklind hex keys are precision heat treated, thus assuring maximum toughness of the core of the wrench along with maximum surface resistance to wear.
